Equipment  
Inc.**

# Bag Break Station

The Ensign Bag Break Stations are designed to feed bagged materials in to your bulk material handling system. Bag Break units are made in modular sections so you can pick the right components for your application. We have Dust Hoods that will support a self contained dust collecting unit or ones that can be connected to your in house dust system. Our hoppers sections can be adapted to screw conveyors or a variety of pneumatic systems. We also have bag compactors, grates and bag cutters to make the job go more easily.

Ensign Equipment Bag Break Stations are built to last with a heavy duty steel construction and quality components. Custom designed units available upon request. See back page for additional specifications.

All Ensign Equipment Inc. products carry a TWO YEAR warranty covering defects in manufacture, workmanship and components.
